

SETTING UP ANDRIOD APPLICATION:

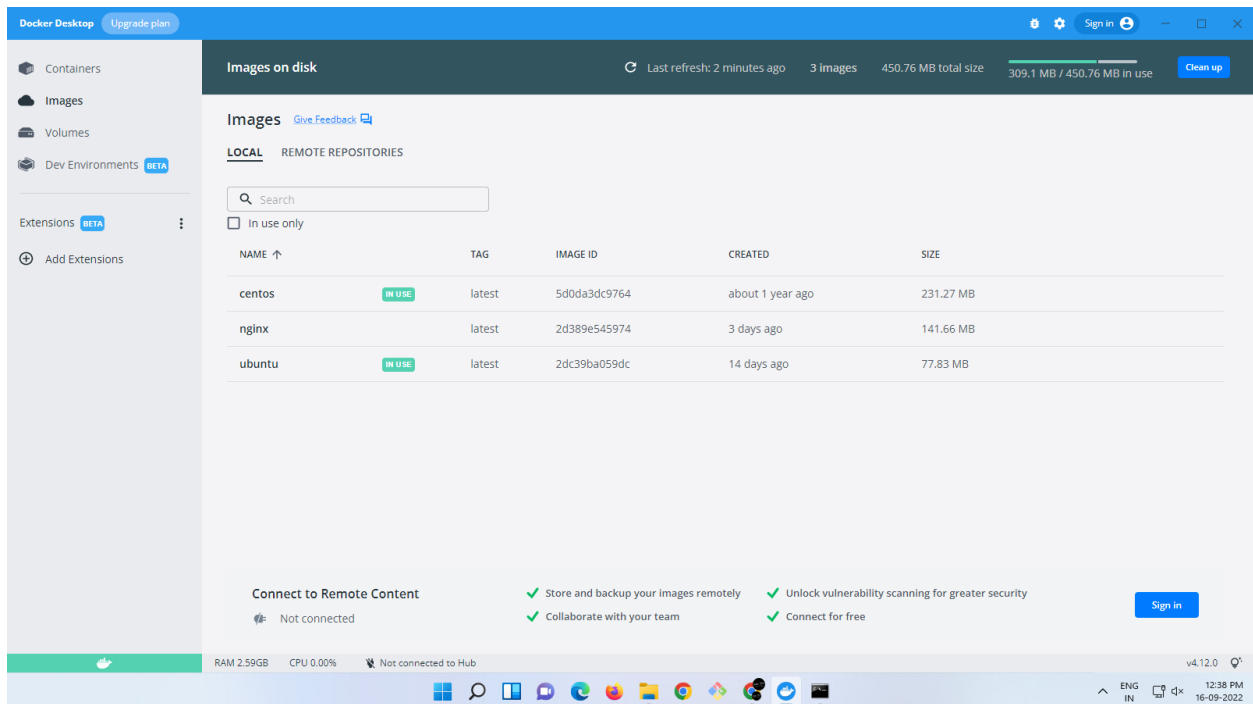

Create a project and follow the flask documentation

Installing IBM Cloud CLI:

Docker CLI installation

Create an account in Sendgrid. We use the services as email integration to our application for sending emails.

The screenshot shows a web browser window with the SendGrid dashboard. The browser's address bar displays the URL `app.sendgrid.com/guide?from=profile&integrate=true`. The dashboard features a left-hand navigation menu with options like 'Dashboard', 'Email API', 'Marketing', 'Design Library', 'Stats', 'Activity', 'Suppressions', 'Settings', and 'Twilio SMS'. The main content area is titled 'Welcome, Keerthi!' and includes a sub-header 'Send your first emails with Twilio SendGrid'. Below this, there is a section for 'Create a sender identity' which explains the need for a sender identity and provides two options: 'Create a Single Sender' and 'Authenticate a domain instead'. A visual example of an email header is shown, with the 'from' field set to 'Your Business <jane.doe@your_business.com>'. At the bottom of the dashboard, a 'Send your first email' section prompts the user to create a sender identity before sending.

Welcome, Keerthi!

To get up and running quickly, please follow the steps outlined below.

Send your first emails with Twilio SendGrid

Create a sender identity

Before sending email, you'll need to create a sender identity. There are [two ways](#) to do this, but we recommend creating a Single Sender to get set up quickly and test your email integration.

[Create a Single Sender](#) [Authenticate a domain instead](#)

Your sender identity is the "from" email address your recipients will see in their inbox. [Learn more](#) about this.

Your Business <jane.doe@your_business.com>

to me

Send your first email

Please create a sender identity before sending your first email.
