

Task1:

Create an account in Sendgrid. We use the services as email integration to our application for sending emails.

The screenshot shows the SendGrid dashboard in a web browser. The browser's address bar displays `app.sendgrid.com/guide?from=profile&integrate=true`. The dashboard has a left sidebar with navigation links: Keerthi Suresh (user profile), Dashboard, Email API, Marketing, Design Library, Stats, Activity, Suppressions, Settings, and Twilio SMS (marked as NEW). The main content area is titled "Welcome, Keerthi!" and includes a sub-header "To get up and running quickly, please follow the steps outlined below." Below this is a blue banner that reads "Send your first emails with Twilio SendGrid". The primary task is "Create a sender identity", which includes instructions: "Before sending email, you'll need to create a sender identity. There are [two ways](#) to do this, but we recommend creating a Single Sender to get set up quickly and test your email integration." Two buttons are provided: "Create a Single Sender" (in blue) and "Authenticate a domain instead" (in light blue). To the right, a text box explains: "Your sender identity is the 'from' email address your recipients will see in their inbox. [Learn more](#) about this." Below this is a diagram of an email header showing "Your Business" as the sender name and "<jane.doe@your_business.com>" as the email address. At the bottom of the main area, a section titled "Send your first email" contains the message: "Please create a sender identity before sending your first email." with a lock icon. The bottom of the screen shows a Windows taskbar with various application icons and a system tray indicating the time as 11:02 AM on 16-09-2022.
