

Empathy map:

SETTING UP ANDRIOD APPLICATION:

Create a project and follow the flask documentation

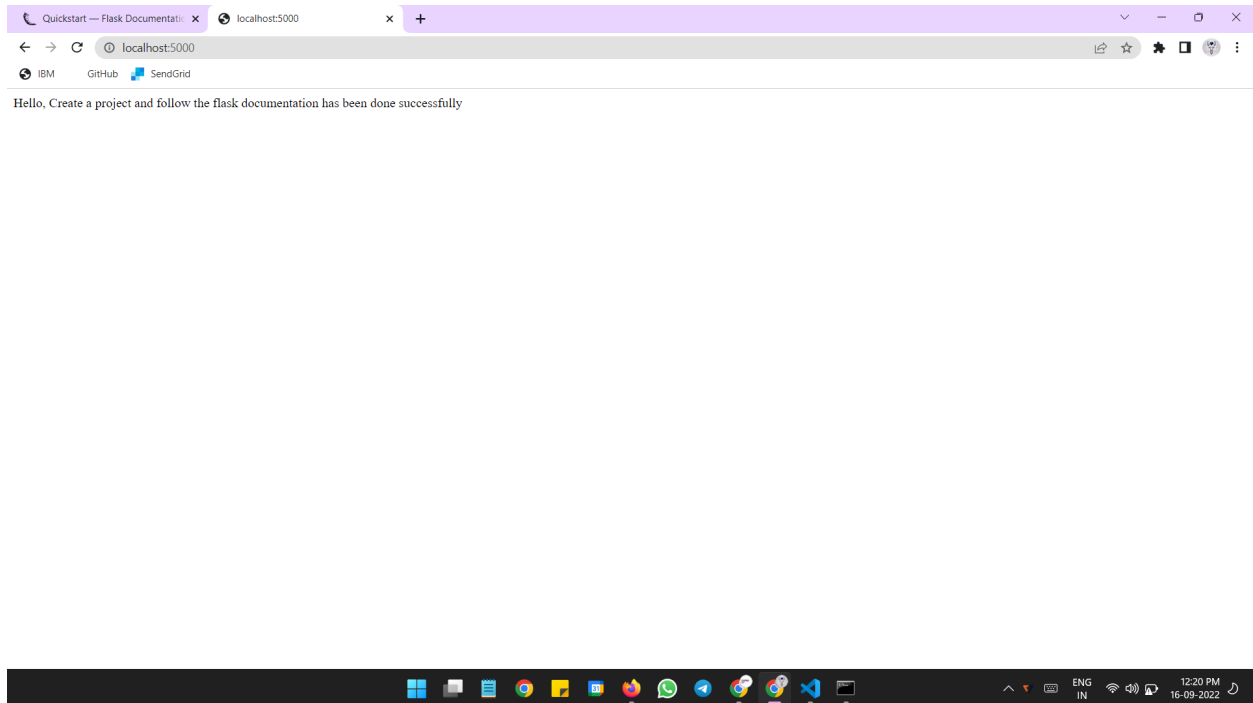

The screenshot shows the Visual Studio Code interface with a Flask application named 'sample.py' open. The code in the editor is as follows:

```
1 from flask import Flask
2
3 app = Flask(__name__)
4
5 @app.route("/")
6 def hello_world():
7     return "<p>Hello, Create a project and follow the flask documentation has been done successfully</p>"
```

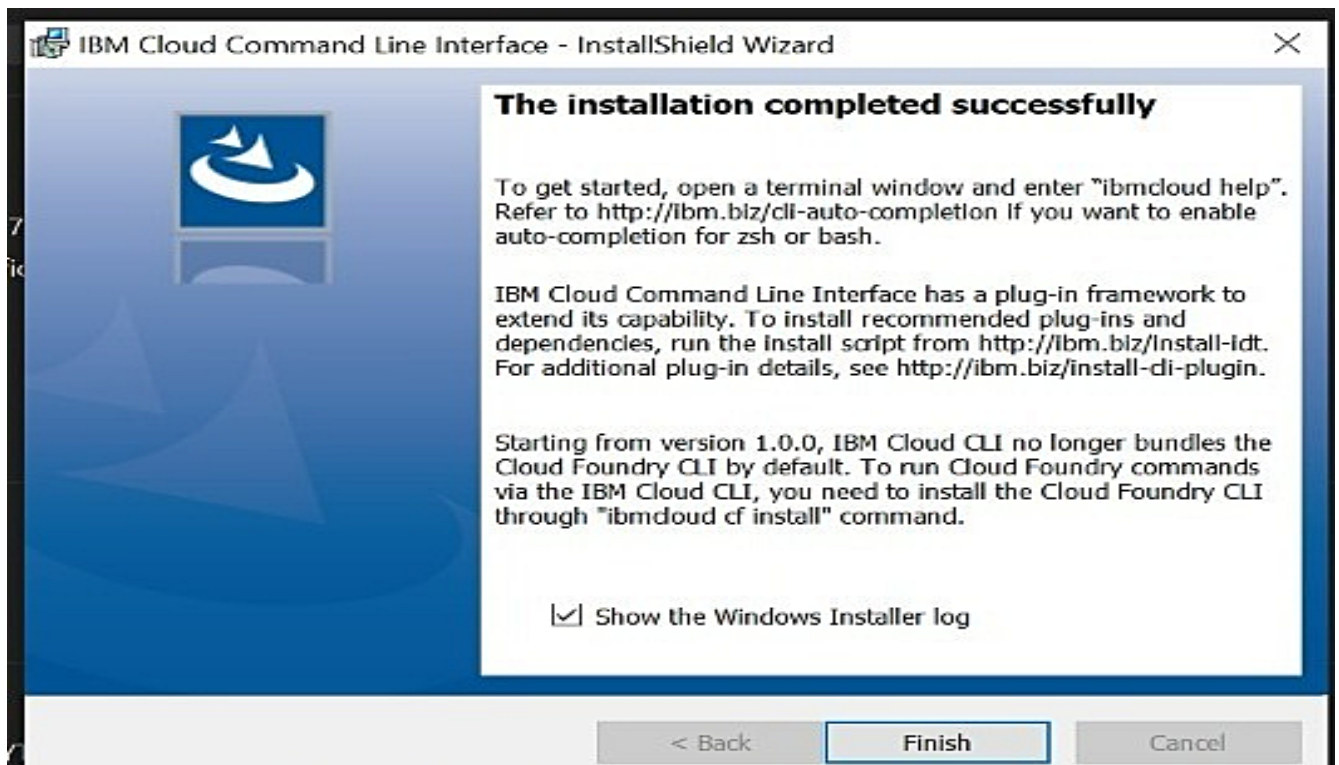

The terminal at the bottom shows the output of running the application, which includes a suggestion to use the correct command:

```
+ sample.py
+ ~~~~~
+ CategoryInfo          : ObjectNotFound: (sample.py:String) [], CommandNotFoundException
+ FullyQualifiedErrorId : CommandNotFoundException

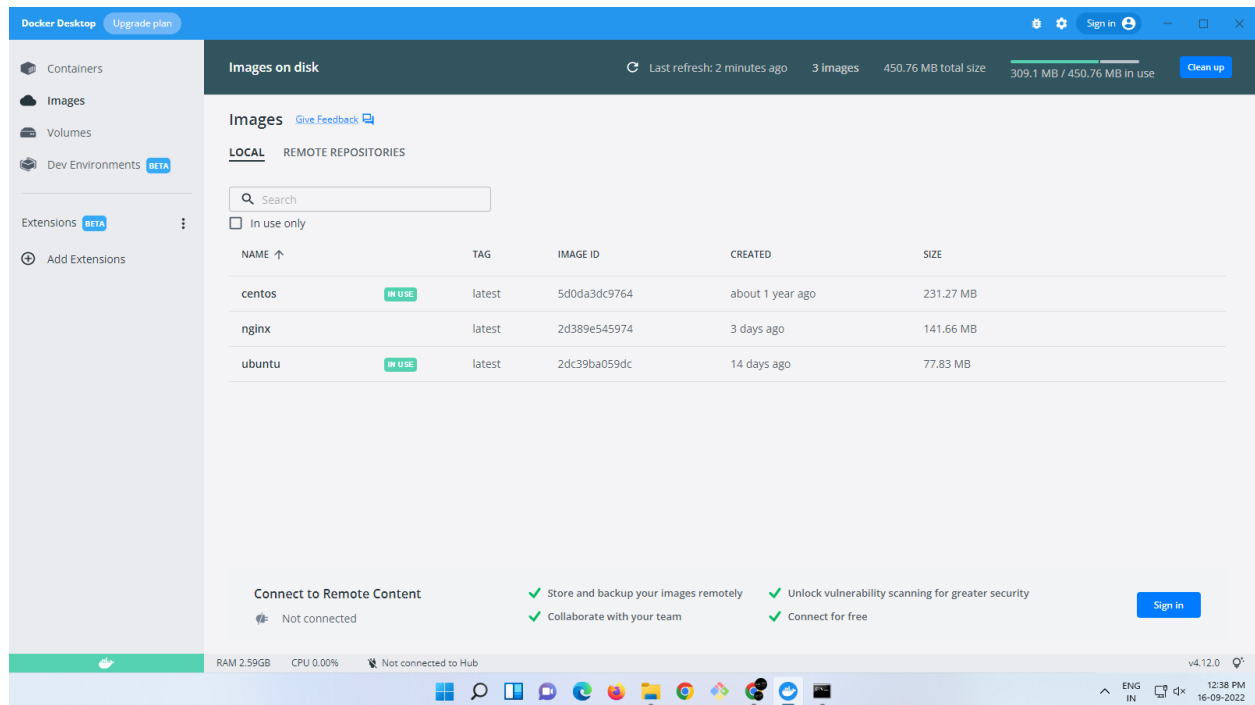

Suggestion [3,General]: The command sample.py was not found, but does exist in the current location. Windows PowerShell does not load commands from the current location by default. If you trust this command, instead type: ".\sample.py". See "get-help about_Command_Precedence" for more details.
PS D:\EL\py>
```

Installing IBM Cloud CLI:

Docker CLI installation
